What is included in a 2KW solar installation kit?

Complete 2kW DIY solar panel kit for home installation. Each DIY solar install kit includes solar panels, microinverters, and racking.

How much solar can a 20 foot container hold?

20 foot containers can expand from 3,000W of solar up to 6,000W. 40 foot containers can expand from 3,000W up to 12,000W of solar in the future. We love the strategically placed solar panels on top of the container roof - we've accomplished this secure mounting with our field tested RPS Scalable Ground Mount.

How much energy does a 2000W microinverter produce?

Request a shipping quote and get a free solar layout. This 2000W microinverter kit serves as a great entry-level option. The five 400W modules produce enough energy -- 175 to 375 kilowatt(kW) -- to offset small and medium size loads such as lighting, television and kitchen appliances while taking up little roof space.

Are GoGreenSolar solar panels right for You?

GoGreenSolar solar panel kits include a complimentary roof layout, installation support and permit approval guarantees so you don't have to figure it out all on your own. If you're handy with tools, love learning new skills, or enjoy managing and completing projects, DIY solar installation could be ideal for you.
