Thanks to one small town, it seems there might yet be hope for Europe, and for a greener future without risky dependencies on China.

At BYD, Shen led the design and construction of the first battery manufacturing base in China with a capacity above 10GWh and the design of the first LFP-battery for xEVs.

An augmented focus on energy storage development will substantially lower the curtailment rate of renewable energy and add ...

An augmented focus on energy storage development will substantially lower the curtailment rate of renewable energy and add tractability to peak shaving, contributing to coal ...

While not as dominant as hydroelectric storage, battery energy storage systems (BESS) are gaining traction in Norway for shorter-term storage and grid services.

Norway's extensive hydro capacity is better suited for seasonal storage and appears well-positioned to compete in the long-duration storage market. Nevertheless, further market ...
