What is Danish Center for energy storage?

Danish Center for Energy Storage, DaCES, is a partnership that covers the entire value chain from research and innovation to industry and export in the field of energy storage and conversion. The ambition of DaCES is to strengthen cooperation, sharing of knowledge and establishment of new partnerships between companies and universities.

How can Denmark develop a new energy technology?

If Denmark shall succeed in the development and implementation of new energy technologies such as energy storage and conversion, a broad knowledge of political and legal frameworks, economic models, the role of civil society as well as new forms of organization and collaboration across sectors and disciplines is necessary.

What technologies are included in the Energy Storage Catalogue?

The catalogue contains both existing technologies and technologies under development. The catalogue contains data for various energy storage technologies and was first published in October 2018. Several battery technologies were added up until January 2019. Technology data for energy storage Datasheet for energy storage

How can Danish corporations contribute to a sustainable world?

Danish corporations shall gain a position of strength, that builds on a close interaction between research and corporations - with an ambition of contributing to a sustainable planet as well as ensuring jobs, export and earnings in Denmark.

DaCES is a unique platform within energy storage and conversion where Danish universities and companies work closely together to develop disruptive technologies and training courses, ...

We are developing battery storage projects from green field to construction and into operations. In recent years, we have been developing our ...

In the report "Status, Strengths, Synergies - DaCES" report on energy storage in Denmark 2023, the center presents 17 recommendations across five areas: thermal energy storage, batteries, ...

These installations represent a key element within the energy industry, as they allow producers to adapt to fluctuations in energy demand and ...
