How much does a lithium ion battery cost?

The average price of lithium-ion battery packs is \$152/kWh, reflecting a 7% increase since 2021. Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs.

Why are lithium-ion batteries so expensive in 2025?

In 2025, lithium-ion battery pack prices averaged \$152/kWh, reflecting ongoing challenges, including rising raw material costs and geopolitical tensions, particularly due to Russia's war in Ukraine. These factors have led to high prices for essential metals like lithium and nickel, impacting the production of energy storage technologies.

Will energy storage be a game changer for lithium?

“Looking ahead, energy storage is likely to become a game changer for lithium, improving its fundamentals, but too high a price could undermine the economics of energy storage, keeping a lid on prices,” Su said.

Will China's power sector reforms fuel a strong demand for lithium?

Sign up here. But China's power sector reforms helped to fuel stronger than expected demand for lithium used in batteries for power system storage in the second half of 2025, supporting a cautiously optimistic view of prospects for the new year.

Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs. Fixed operation and maintenance costs for battery systems are estimated at ...

We put together a complimentary quarterly report using a portion of this one-of-a-kind, direct-from-supplier energy storage pricing available from Anza.

Wider deployment and the commercialisation of new battery storage technologies has led to rapid cost reductions, notably for lithium-ion ...

Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs. Fixed operation ...
