Communication Interface: Sends battery data to an external MCU or BMS Controller via SPI, CAN, I2C, etc.  
Power Management: Regulates power for the chip itself, often powered ...

A Battery Management System (BMS) safeguards lithium-ion batteries by monitoring voltage, current, and temperature, preventing overcharge, discharge, and thermal ...

A Battery Management System (BMS) is essential for ensuring the safe and efficient operation of battery-powered systems. From real-time monitoring and cell balancing to thermal ...

Communication Interface: Sends battery data to an external MCU or BMS Controller via SPI, CAN, I2C, etc.  
Power Management: ...

Learn how a Battery Management System (BMS) protects lithium batteries by controlling charging and discharging. Understand BMS logic, key safety ...

There are many BMS design features, with battery pack protection management and capacity management being two essential features. We'll discuss how these two features work here.
