These technical requirements summarize a minimal and uniform set of recommendations for purchasing and operating smart and bidirectional charging infrastructure.

In developing the bidirectional charging system, Compleo is relying on high-performance and reliable charging technology as well as five years of field test experience in bidirectional ...

To this end, an intelligent bidirectional charging management system and the associated components of EVs were developed and tested in a real environment to be able to ...

This thesis studies a virtual power plant (VPP) that trades the bidirectional charging flexibility of privately owned plug-in electric vehicles (EVs) in a real-time electricity market to maximize its ...

Smart charging stations, bidirectional charging capabilities, and grid-responsive energy management systems have been proposed as key solutions to ensure that EV adoption does ...

As the federal government moves toward fleet electrification, site decarbonization, and deployment of local distributed energy resources (DERs), agencies should consider both ...
