---

The solution to these key scientific and technological problems lies in establishing a theoretical and technical foundation for the development of large-scale deep underground ...

In order to improve resource utilization and upgrading of transformation, a hybrid compressed air energy storage (CAES) system combining wind power and solar energy is proposed, and the ...

Key Words: carbon dioxide (CO<sub>2</sub>), compressed-air energy storage (CAES), Earth Battery, geothermal energy, Laboratory Directed Research and Development Program, renewable ...

In addition to renewable energy production, underground spaces can also be used as storage facilities for renewable energy. One promising technology is underground pumped ...

This article suggests using a gravitational-based energy storage method by making use of decommissioned underground mines as storage reservoirs, using a vertical shaft and ...

Buscheck says, "In the Earth Battery concept, either air or CO<sub>2</sub> can be used as a supplemental nonaqueous working fluid to store energy as pressure underground. We actually started with ...
