---

These paralleled inverters are usually connected to the grid through LCL filters which tend to aggravate the system resonance and instability issues due to coupling produced by the grid ...

This study proposes a joint active damping approach that combines grid current feedback and the point of common coupling (PCC) voltage unit feedforward. The proposed ...

This book focuses on control techniques for LCL-type grid-connected inverters to improve system stability, control performance and suppression ability of grid current harmonics.

LCL-type grid-connected inverters have seen extensive use of the passivity-based control (PBC) system. However, traditional PBC systems rarely take time delay into account ...

To improve the anti-interference performance and reduce the output current harmonic content of the grid-connected inverter, an improved control ...

The paper concludes the widely-used control strategy of LCL grid-connected inverter, including adjusting inverter parameters, introducing a filter, voltage source admittance control strategy, ...
