How much does a PV system cost in 2022?

The current MSP benchmarks for PV systems in 2022 real USD are \$28.78/kWdc/yr(residential),\$39.83/kWdc/yr (community solar),and \$16.12/kWdc/yr (utility-scale,single-axis tracking). For MMP,the current benchmarks are \$30.36/kWdc/yr (residential),\$40.51/kWdc/yr (community solar),and \$16.58/kWdc/yr (utility-scale,single-axis tracking).

Who are the authors of solar energy cost benchmarks Q1 2023?

Ramasamy, Vignesh, Jarett Zuboy, Michael Woodhouse, Eric O'Shaughnessy, David Feldman, Jal Desai, Andy Walker, Robert Margolis, and Paul Basore. 2023. U.S. Solar Photovoltaic System and Energy Storage Cost Benchmarks, With Minimum Sustainable Price Analysis: Q1 2023. Golden, CO: National Renewable Energy Laboratory.

What are solar energy cost benchmarks?

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost benchmarks are modeled and download the data and cost modeling program below.

How efficient is a residential PV system in 2024?

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m² and a rated power of 400 watts,corresponding to an efficiency of 21.1%.

NREL"s bottom-up cost models can be used to assess the minimum sustainable price (MSP) and modeled market price (MMP) of PV and storage systems having various ...

This paper applies the cost-benefit analysis method to assess the economic feasibility of implementing renewable energy resources and smart energy technologies in a ...

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. ...

This paper aims to evaluate the net present cost (NPC) and saving-to-investment ratio (SIR) of the electrical
