Alternating current (AC) power generation is a complicated process that requires a number of important components working together to transfer energy from diverse sources into electricity.

A portable power station offers quiet, fume-free power ideal for indoor and portable use. Generators provide higher power longer but are noisy and emit fumes, requiring outdoor use.

There are many different types of electricity generators. Most electricity generation is from generators that are based on scientist Michael Faraday's discovery in 1831. He found ...
