---

The latest generation of double glazing combines optimal light transmission solar control and reinforced thermal insulation. It also helps to reduce external noise pollution.

Many of the Guardian glass solutions designed for high light transmission incorporate double- or triple-silver low-E glass coatings, providing an optimal LSG ratio to help keep interior spaces ...

Introduction: This study investigated the health effects of two different architectural glass types: A two-layered low-iron high transmittance glass and a three-layered low energy ...

Double glazing, compared to single glazing, cuts heat loss in half due to the insulating air space between the glass layers. In addition to reducing the ...

SN 68 (UltraClear) offers high light transmission and solar protection, helping to reduce lighting, cooling, and heating needs.

Many of the Guardian glass solutions designed for high light transmission incorporate double- or triple-silver low-E glass ...
