In order to promote the synergistic development of electric vehicles and renewable energy sources, this paper constructs a comprehensive power planning model that incorporates the ...

Aiming at the charging demand of electric vehicles, an improved genetic algorithm is proposed to optimize the energy storage charging piles optimization scheme.

To meet the charging needs of various types of EVs, energy storage charging piles are divided into fast-charging energy storage charging piles and slow-charging energy storage ...

Abstract This paper presents a two-layer optimal configuration model for EVs' fast/slow charging stations within a multi-microgrid system. The model considers costs related ...

We have constructed a mathematical model for electric vehicle charging and discharging scheduling with the optimization objectives of minimizing the charging and discharging costs of ...

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging, discharging, ...
