---

A team of battery researchers, collaborating across multiple countries, just made a huge breakthrough for iron-chromium redox flow ...

Iron-chromium redox flow batteries (ICRFBs) have emerged as promising energy storage devices due to their safety, environmental protection, and reliable performance.

Iron-chromium flow batteries are available for telecom back-up at the 5 kW - 3 hour scale and have been demonstrated at utility scale. Current developers are working on reducing cost and ...

Researchers led by Korea's UNIST developed a new redox flow battery concept that utilizes iron and chromium ore for redox chemistry.

Through the simulation and analysis of this complex system, researchers can better understand the performance of flow battery systems. It is important to consider various challenges and ...

Discover why Iron-Chromium Flow Batteries are emerging as the safe, cost-effective and scalable solution the world needs for long-duration energy storage.
