What are the components of a base station?

**Power Supply:** The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

What is a base station power supply?

This acts as the "blood supply" of the base station, ensuring uninterrupted power. It includes: **AC distribution box:** Distributes mains power and offers surge protection. **Switch-mode power supply:** Converts and stabilizes power while managing DC output. **Battery banks:** Serve as backup power to keep systems running during outages. 3.

How do outdoor base stations work?

Outdoor base stations integrate all essential systems into a single Integrated Cabinet, designed to endure harsh conditions like direct sunlight, rain, and extreme temperatures. These units protect the equipment while ensuring efficient functionality. Towers are crucial for mounting antennas at high elevations, ensuring wide signal reach.

What are the properties of a base station?

Here are some essential properties: **Capacity:** Capacity of a base station is its capability to handle a given number of simultaneous connections or users. **Coverage Area:** The coverage area is a base station is that geographical area within which mobile devices can maintain a stable connection with the base station.
