What is a battery capacity calculator?

Our super-easy battery capacity calculator takes the guesswork out of sizing your battery. In simple mode, just input these essentials: Load Power (W): Your device's wattage. Runtime (hours): How long you want it to run. Battery Voltage (V): The battery's nominal Voltage.

What is the capacity of a battery or accumulator?

The capacity of a battery or accumulator is the amount of energy stored according to specific temperature, charge and discharge current value and time of charge or discharge.

How much battery capacity do I Need?

This means you need a battery (or battery bank) of at least 83.3Ah capacity to meet that 1 kWh demand. However, you usually don't want to fully discharge the battery to avoid damaging it. For most deep-cycle batteries, staying at around 50% discharge is safer. Doubling 83.3Ah gives about 166.7Ah capacity to account for that 50% cushion.

How many amps can a 20 Ah battery power?

Picture this: a battery rated at 20 Ah can power a device drawing 20 amps for one hour or 1 amp for 20 hours. This simple metric forms the heart of your battery capacity and helps you decide if you've got the power you need for your applications.
