How does a base battery work?

When the grid is working and chances of outages are low, Base sends some energy from the battery back to the power grid. This process is called grid-balancing. Base batteries deploy energy to the grid faster than any other service, which is how Base is able to recoup the cost of the battery equipment and keep prices low for homeowners.

Do base batteries run in two directions?

Base batteries run in two directions, which is how Base is able to keep costs low for homeowners. The batteries charge during off-peak hours, like midday and late at night, when energy is more available and demand is low.

What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

How do I Reset my battery?

Reduce the load by turning off or unplugging devices that use a lot of power. Then, restart the battery by logging into your Base account. How long your battery lasts depends on how much energy your household uses. Your backup duration can change a lot based on your appliances.

If it's in the order of milliseconds, then you're most likely not going to trip a sensor and smash the base fast enough to prevent it from reporting to the monitor service.
