Abstract The energy consumption of the mobile network is becoming a growing concern for mobile network operators and it is expected to rise further with operational costs ...

In this paper, a microgrid in Beijing is taken as the research object, and the Whale Optimization Algorithm algorithm is used to solve the multiobjective problem.

This study proposes a hybrid quantum-classical two-stage stochastic programming approach for the co-planning of BSs and PVs in urban communities.

Grounded in the spatiotemporal traits of chemical energy storage and thermal energy storage, a virtual battery model for base stations is established and the scheduling ...

In this paper, a multi-objective capacity optimization allocation strategy for hybrid energy storage microgrids applicable to 5G base stations in remote areas is proposed. The strategy combines ...

This study proposes a hybrid quantum-classical two-stage stochastic programming approach for the co-planning of BSs and PVs in ...
