Indonesia's renewable energy sector has shown progress, particularly in the development of wind and solar capacities, though substantial growth is still required.

The Indonesian government has ratified the PLN Electricity Supply Business Plan (RUPTL) 2025-2034, targeting 42.6GW of new renewable energy generation capacity and ...

Indonesia has announced an ambitious plan to deploy 100 GW of solar power nationwide, combining large-scale generation with an unprecedented rural electrification push.

Currently, the country's renewable energy mix includes hydropower, geothermal, bioenergy, wind, and solar energy. These resources are in varying stages of development, ...

These policies aim to make solar energy projects more attractive to potential investors by ensuring stable revenue sources for solar energy developers (MEMR, 2021).

Technological advancements in solar energy are also propelling the growth of solar power plants in Indonesia. The introduction ...
