---

82% of U.S. energy comes from fossil fuels, 8.7% from nuclear, and 9.1% from renewable sources. In 2023, renewables surpassed coal in energy generation. 1 Wind and solar are the ...

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn't ...

Energy storage is a technology that holds energy at one time so it can be used at another time. Building more energy storage allows renewable ...

By integrating energy storage technologies, such as batteries and pumped hydro storage, into the grid, we can transform intermittent renewable energy sources like wind and solar into reliable, ...

Growing levels of wind and solar power increase the need for flexibility and grid services across different time scales in the power system. There are many sources of flexibility and grid ...

Deployed together with variable renewable energy like wind and solar, it can help displace costly and polluting fossil fuel-generated electricity, while increasing security of ...
