When you use the Work items and direct links type query, it can list all work items with directly links. It cannot display the linked work items that the sub child is connected to. For ...

How would I use python to check a list and delete all duplicates? I don't want to have to specify what the duplicate item is - I want the code to figure out if there are any and remove them if so,

This can bring us convenience according to our usage habits. So, if we add the option for All Work items in the Work items screen, this will greatly increase the burden of ...

The align-items property of flex-box aligns the items inside a flex container along the cross axis just like justify-content does along the main axis. (For the default flex-direction: ...

I just created a list of work items, under a project in Azure DevOps: 1 epic and 3 features (these 3 are child linked to the epic). But when I go to the backlogs to see these ...

Also, since items returns a copy of the dictionary's list of (key, value) pairs, it is less efficient, unless you want to create a copy anyway. In Python 2, it is best to use iteritems for iteration.
