Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's rapid expansion of renewable energy ...

Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's ...

Electricity from solar has overtaken hydropower in China and is poised to surpass wind this year to become the country's largest source ...

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. ...

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentivesChina is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity.

This moment, often referred to as the China Solar Power Surge, marks a significant shift not just in China's energy infrastructure ...
