What is the energy consumption pattern in Luxembourg?

Also the industrial energy consumption pattern is unique,with the steel industry consuming nearly 40% of the national electricity . Lacking fossil fuels,Luxembourg depends on external energy imports,be it oil or natural gas,making it reliant on a robust and competitive European energy market.

How much energy does Luxembourg use per capita?

It also ranked first among the IEA member countries regarding the energy consumption per capita,with 6.1 tonneof oil equivalent (toe) . Although Luxembourg's government heavily invested in the roll-out of renewable energies by doubling the total supply from 2008 to 2018,it still lags behind most high GDP countries .

Will Luxembourg expand offshore wind power capacity by 2030?

Within wind power initiatives,Luxembourg is collaborating on cross-border projects in the North Sea to expand offshore wind power capacity to 120 GWby 2030.within wind power initiatives,Luxembourg is collaborating on cross-border projects in the North Sea to expand offshore wind power capacity to 120 GW by 2030.

What projects does Luxembourg participate in?

Luxembourg participates in projects financed by the EU Innovation Fund,which supports innovative industrial initiatives. For example,projects related to energy storage,recycling and carbon capture and storage (CCUS) are being developed to reduce emissions in energy-intensive industries.
