Danphone's GMDSS Coastal Radio Solution is a complete, flexible and scalable IP-based radio communication system primarily for coast stations, ports and off-shore installations and ...

The guide shifts HF single sideband communications from an essential means of long haul communications to an optional means of communications. This reflects the global shift of ...

Maritime communication systems are the invisible threads linking ships to shore, to each other, and to emergency responders. From distress signals in storms to route coordination through ...

Abstract: This research delves into an integrated sensing and communication (ISAC) system, which leverages a ship-based station to simultaneously offer maritime communication services ...

The GMDSS is an automated ship-to-shore and ship-to-ship system using satellites and/or terrestrial radio systems with digital selective calling technology.

Wireless communication is key to safe and efficient maritime operations. Maritime communication faces unique challenges in coverage and reliability. Review includes terrestrial, ...
