What is container labeling?

Login or Register to access special features and free premium content. Container labeling is a highly effective method to communicate the physical and health hazards of chemicals used in the workplace. Shipped containers must display labels made by the manufacturer or distributor.

What is a OSHA compliant container label?

Compliant labels also support your overall hazard communication program, which is central to OSHA's Hazard Communication Standard (HCS) under 29 CFR 1910.1200. What is a Secondary Container?

What information is on a properly labeled container?

The labels on a properly labeled container will have the following information, located together (other information may also appear on the label): Hazard Statement(s): The hazard class and category that describes the nature of the hazard (s) of a chemical, including, where appropriate, the degree of risk. Example: Fatal if swallowed.

What are the labeling requirements for a container?

All labels are required to have pictograms, a signal word, hazard and precautionary statements, the product identifier, and supplier identification We'll look at the labeling requirements for each of the four types of containers listed below: Shipped (Primary) Containers: Labels that are shipped to manufacturers or distributors.
