A Practice Note discussing the process of connecting an energy generating or battery storage facility to the electric grid and the legal and regulatory framework applicable to the ...

Distributed Generation or Energy Storage Systems neither designed to operate, nor operating, in parallel with the utility's electrical system are not subject to these requirements. This document ...

Significantly, inverter-based resources and storage assets are eligible to receive compensation for reactive power produced in most--though not all-- markets. While FERC has permitted wide ...

This study conducts a comparative analysis of the practicality and control methodologies of GFM inverters relative to traditional grid-following inverters from a system ...

System improvements, including grid stability and resilience, have been observed in ERCOT assessments with advanced grid support inverter-based ESRs.

All inverter based systems will be allowed to interconnect to the utility system for a period not to exceed two hours, for the sole purpose of ensuring proper operation of the installed equipment.
