Our industry-leading expertise allows us to work together with our customers to design and commission complete energy systems - including ...

It is now only possible to operate storage equipment if it is part of an electricity production plant (production license) or if it is used exclusively for the operational purposes of the distribution ...

The Prague project demonstrates that scalable renewable energy storage is no longer theoretical. As cities worldwide adopt similar models, expect faster transitions to carbon-neutral power grids.

The update also eases rules for energy storage, exempting systems from separate licensing if their capacity does not exceed 20% ...

Each year, 335 MW of new installed capacity will be supported, equivalent to the current total installed capacity in the Czech Republic. The Ministry has revised the long ...

a total capacity of more than 10 megawatts or wind power plants with a mast height of more than 50 meters, the assessment under this act is a mandatory part of the construction procedure.
