Can unmanned aerial vehicle-based approaches support PV plant diagnosis?

This study aims to give an overview of the existing approaches for PV plant diagnosis, focusing on unmanned aerial vehicle (UAV)-based approaches, that can support PV plant diagnostics using imaging techniques and data-driven analytics.

Can unmanned aerial and ground vehicles design a fully automated power plant inspection process?

Abstract: This article addresses the design of a fully automated photovoltaic (PV) power plant inspection process by a fleet of unmanned aerial and ground vehicles (UAVs/UGVs).

How are aerial and ground data used in a solar PV system?

In their study, aerial data were taken using a UAV drone, collecting RGB images to build an orthophoto of the PV system and used it as an interactive map in the GIS application. In addition, thermal photos were captured and reviewed using ThermoViewer. On the other hand, ground data were acquired with I-V curve tests.

How efficient are multi-rotor cleaning drones for distributed PV stations?

Multi-rotor cleaning drones for distributed PV stations are 40+ times more efficient than manual cleaning, using only 10% water and 1/3 cost, with >90% dust removal. This addresses manual inefficiency and cleaning difficulty, offering a new technical solution for specialized, refined distributed PV systems.

Due to the limitations of the low efficiency of human inspection affected by geographical environment, and the difficulties in locating failure position caused by the lack of data support ...

The regular cleaning of the surface of photovoltaic assembly can greatly improve the efficiency of photovoltaic assembly generation. This problem has been solved well by choosing ...

This paper presents a condition monitoring system based on an unmanned aerial vehicle that embed an infrared sensor for photovoltaic inspection. Real time kinematic system ...

In this paper, based on Deep Reinforcement Learning (DRL), we propose a UAV-assisted scheme, which could be used in scenarios without awareness of sensor nodes" (SNs) ...

In such cases unmanned ground vehicles (UGVs, or "robots") can be advantageous for PV plant inspection.
