The study addresses challenges hindering solar energy development in Palestine and identifies investment drivers necessary for its growth. It also aims to develop a framework ...

The solar power can be a key supplier of energy to the forthcoming generations in Palestine, due to the total amount of yearly sunshine"s hours (3000 h) and annual solar radiation (5.4 kWh/m).

Solar power is often touted as the most promising renewable energy source in Palestine, due to its ample sunlight. Over half of all households in Palestine utilise solar energy heaters, although only 3% of houses depend on it as their main source. A 710kw photovoltaic plant was commissioned in September, 2014 in the vicinity of Jericho; it is the largest plant in Palestine to date. Research h...

Thus, this paper aims to discuss the current energy policy model for photovoltaic generation in Palestine and the challenges facing it.

Renewable energy is not only a viable economic choice in Palestine, but it is also an imperative requirement to end the country"s current energy crisis, which is particularly acute in ...

Given the challenges of land accessibility and the lack of a high-voltage electricity backbone in Palestine, leveraging rooftop space is ...
