Small cells are low-powered cellular radio access nodes that have ranges from around 10 meters to a few kilometers. They are base stations with low power consumption and cost.

This is the first blog post in a 2-part series looking at small cell base stations. Part 1 covers the basics of small cells and how they fit into the evolution of 4G and 5G. Part 2 will ...

They are base stations with low power consumption and cost. They can provide high data rates by being deployed densely to achieve high spatial spectrum efficiency. In the United States, recent FCC orders have provided size and elevation gui...
