---

Our desalination solution needs 70% less electricity by Energy Recovery Technology, which means we can make water with 70% fewer solar panels. We have also been able to design ...

Envisioned as a way to provide water to communities whose groundwater is too brackish to drink, the device's real trick is that it ...

Solar-powered desalination systems can be designed to be modular and scalable. This flexibility allows for deployment in remote areas with limited infrastructure or in small ...

Envisioned as a way to provide water to communities whose groundwater is too brackish to drink, the device's real trick is that it adjusts its desalination activity in response to ...

MIT engineers built a solar-powered desalination system that produces large quantities of clean water despite variations in sunlight throughout the day. Because it requires ...

Portable solar-powered desalination unit, skid-mounted for easy transport, providing reliable fresh water in remote locations and emergencies.
