Faced with a shortage of labor, at the beginning of the year the Cuban government implemented a special pay system for those working on the photovoltaic parks and the cement ...

The cement-based battery introduced in this paper has potential to fundamentally change this paradigm by enabling the storage of electrical energy within concrete infrastructure.

Smart integration features now allow multiple containers to operate as coordinated virtual power plants, increasing revenue potential by 25% through peak shaving and grid services.

MIT engineers have created an energy-storing supercapacitor from three of the world's most abundant materials: cement, water, and ...

In the present work, the authors have attempted to design a solar cement plant for supplying solar energy to the cement industry. A case study was done, which investigated a ...
