Aqueous sodium-ion batteries are practically promising for large-scale energy storage, however energy density and lifespan are limited by water decomposition.

In this context, SIBs have gained attention as a potential energy storage alternative, benefiting from the abundance of sodium and sharing electrochemical characteristics similar to ...

Sodium-ion batteries (SIBs) are promising candidates for stationary energy storage due to raw material availability and low-cost battery production. 1, 2 To reach the maximum specific ...

Meanwhile, sodium-ion batteries (SIBs), whose working principle is similar to that of LIBs, have been gradually emphasized by researchers due to the advantages of abundant ...

In February 2023, the Chinese HiNA placed a 140 Wh/kg sodium-ion battery in an electric test car for the first time, [16] and energy storage manufacturer Pylontech obtained the first sodium-ion ...

Research suggests that sodium-ion batteries will be able to meet the growing demands for energy storage in a sustainable way.
