---

Solar Electric Propulsion (SEP) is an advanced technology ideally suited for long-duration space missions requiring high efficiency and low-thrust propulsion. SEP systems ...

At the core of NASA's Artemis mission is Gateway, a lunar outpost that demands advanced power and propulsion. Aviation Week spoke with Chris Coker about how the ...

Engineers from NASA and Aerojet Rocketdyne have begun the multiyear qualification testing of the most powerful solar electric ...

Engineers from NASA and Aerojet Rocketdyne have begun the multiyear qualification testing of the most powerful solar electric propulsion (SEP) thrusters, which are ...

Why Consider Solar Electric Propulsion? Some Factors Influencing Spacecraft Mass Allocations: Mission: DV, duration, environments Technology changes: launcher size/capability, payload ...

Solar electric propulsion is a form of spacecraft propulsion that utilizes solar panels to convert sunlight into electricity, which is then used to power ion engines. These engines ...
