---

Human understanding of the Solar System has grown dramatically through centuries of observation and space exploration. Starting with early telescopic discoveries and ...

At last, with interplanetary travel, instruments can be carried to many solar system objects, to measure their physical properties and dynamics directly and at very close range.

Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as ...

The Solar System is an ordered system, as are 37% of observed systems. Similar systems however are the majority, comprising 59% of observed systems, while mixed systems ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own ...

Direct motion occurs when a planet appears to move in the same direction as the Sun, which rises in the east and sets in the west. This eastward movement is not a true reflection of the planet's ...
