What is solar PV Testing?

The term photovoltaic (PV) refers to a system that uses semiconductor materials to convert light into electricity - resulting in a photovoltaic effect. PV systems come in varying sizes and formats, so an understanding of PV components and how they are used is needed before PV testing can be performed.

What is a solar cell testing kit?

It is an all-in-one solution for the rapid characterization of solar cells. We have designed the I-V test system and solar simulator to work seamlessly together and tested their performance against other solutions. With our solar cell testing kit, you can be confident that reliable device metrics are only a few clicks away.

What is the Ossila solar cell testing kit?

The Ossila Solar Cell Testing Kit includes both a source measure unit and an LED-based solar simulator. It is an all-in-one solution for the rapid characterization of solar cells. We have designed the I-V test system and solar simulator to work seamlessly together and tested their performance against other solutions.

What is included in a solar test kit?

Our complete test kits include everything you need to safely test and commission solar PV systems, including our accurate Solar Survey 200R irradiance meter, AC/DC power clamp and all leads and adaptors. Take a look at our 1000V and 1500V testers below and get in touch if you would like more information.

A Complete System to Perform Solar Cell Characterization
Software Requirements In The Box
Solar cell I-V test system and solar simulator, available at a discounted price
