Solar cells are subject to degradation by exposure to proton and electron radiation. In addition to EQFLUX, SPENVIS provides access to a method for implementing the displacement damage ...

Several interrelated factors increase the risk of glass failure in modern solar panels. These range from technological advancements to ...

In this work, a novel finite element formulation and numerical implementation is proposed for the simulation of transient thermal ...

In this work, a novel finite element formulation and numerical implementation is proposed for the simulation of transient thermal analysis in thermo-rehologically complex ...

Herein, we developed a novel machine-learning-based optical model that estimates solar cell efficiency's degradation because of dust accumulation. Glass substrates ...

In this paper, a displacement damage simulation model for proton-irradiated GaInP/GaAs/Ge triple junction (TJ) solar cells is constructed in Geant4, and the problem of the ...
