The iSolar BX solar controller can be used to control your solar hot water or solar space heating systems, or can be customized to control any number of other solar related applications.

The SolarTouch™ Solar Controller system consists of a four button controller, a valve actuator, a positive sealed diverter valve and two temperature sensors (used for water and solar).

Various methods exist to implement solar temperature control, including photovoltaic systems, solar thermal collectors, and hybrid ...

Get the best performance from your solar system with our user-friendly controls. Choose from a full range of controls for every level of application!

Solar temperature control systems are designed to optimize the energy harnessed from sunlight for heating and cooling purposes. These systems rely on solar panels and other ...

This article explores how PID control can be implemented to regulate the temperature of solar panels, including the basic principles of ...
