Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands.

In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generat

The rise of "electrotech" - solar, wind, batteries and electrified transport, heating and industry - became the dominant engine of global energy growth, led by China's ...

The results of the study show that wind-solar hybrid systems can effectively reduce the dependence on fossil fuels and reduce environmental pollution, and they play an increasingly ...

Solar and wind resources vary across space and time, affecting the performance of renewable energy systems. Global land-based complementarity between these two resources ...

Accelerating energy transition towards renewables is central to net-zero emissions. However, building a global power system dominated by solar and wind energy presents ...
