---

The standard tests applicable inverters and their corresponding Microgrid Interconnection Device (MID) to confirm proper operation (i.e. isolating from and reconnecting to the grid)

An inverter is one of the most important pieces of equipment in a solar energy system. It's a device that converts direct current (DC) electricity, ...

Solar first: Solar energy power your load, battery energy active when solar power doesn't work. SBU priority: Solar power first, then battery power, then Utility.

SBU Mode (Solar-Battery-Utility/Grid) SBU mode prioritizes using solar power first, then battery power, and only draws from the utility grid as a last resort. How it Works: Solar First: The ...

Loads are primarily powered by solar energy. If the solar power is insufficient, the battery will provide power. If the battery voltage drops below the voltage threshold for switching to grid ...

If you are on SBU priority and OSO (only solar) Charging, it won't charge from utility unless battery is at a critical level. Please make sure you are on OSO and not CSO ...
