How big should a solar inverter be?

Getting the inverter size right depends on two key factors: Inverters work most efficiently when operating near their maximum capacity and are typically sized to be roughly the same size as your solar panels. Inverters are usually sized lower than the kilowatt peak (kWp) of the solar array because solar panels rarely achieve peak power.

How to choose a solar inverter?

Choose an inverter that has a surge watt rating equal to or greater than this value. As for voltage drop, check the wire length between your solar panels and the batteries. If the wire length is long, you may need to choose a lower voltage system (12V, 24V, or 48V) to minimize voltage drop.

What is inverter size?

Inverter size is measured in watts (W) and depends on two key specs: *Important: Your inverter must cover both the total running watts of all devices plus the highest surge wattage of any single appliance. 3.
