What is irf3205 inverter?

The IRF3205 inverter circuit is commonly used as 12V DC DIY invertersto get 110/230V AC,especially in medium to high-power applications. Inverters are the circuits that convert direct current (DC) from the battery into alternating current (AC).

What is irf3205 MOSFET?

The IRF3205 is an N-channel MOSFETthat offers low $R_{DS(on)}$ around 8m Ω for minimal power loss on working. The drain-to-source voltage (V_{DS}) is 55V. The MOSFET can handle a continuous drain current of up to 110A,making it suitable for high-current circuits.
