How do you extinguish a lithium ion battery fire?

The batteries contain liquid electrolytes that provide a conductive pathway, hence the Class B classification. To extinguish a lithium-ion battery fire, use a standard ABC or dry chemical fire extinguisher. Clean agent fire suppression systems are particularly well-suited for addressing lithium-ion battery fires.

Can a lithium battery fire be avoided?

Yes. If a lithium battery fire cannot be avoided, several techniques should be used to put it out quickly and safely. The most effective way to extinguish a lithium battery fire is usually with either water or dry chemical powder-based extinguishers such as Class D extinguishers.

Which fire extinguisher should I use for a lithium battery fire?

For lithium battery fires, a standard ABC or CO₂ extinguisher is not recommended. Instead, use an extinguisher specifically designed for these fires. An encapsulator agent extinguisher like F-500 EA or a certified lithium-ion fire model is best.

Can you use a foam extinguisher on a lithium battery?

Foam extinguishers can sometimes help control smaller lithium battery fires, although they are not ideal. Apply the foam at the base of the fire and move closer only if it is safe to do so. Keep in mind that foam may suppress the fire temporarily, but it might not fully cool the battery, leaving a risk of reignition.

Learn how to extinguish a lithium battery fire safely using ABC extinguishers, foam, or Class D agents. Follow key steps to prevent reignition and ensure safety.

Learn how to handle and extinguish lithium-ion battery fires safely. Understand the risks, thermal runaway, and proper fire protection methods.

In this article, I'll share expert insights on how to safely and effectively extinguish lithium battery fires, along with preventive measures ...
