NLR's EDGES model configures optimal, cost-effective behind-the-meter-storage (BTMS) and distributed generation systems based on the weather patterns, building type, and ...

Vehicle-to-grid (V2G) is a smart charging technology that enables electric vehicle (EV) batteries to give back to the power grid. V2G-enabled EVs ...

Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's ...

Vehicle-to-grid (V2G) is a smart charging technology that enables electric vehicle (EV) batteries to give back to the power grid. V2G-enabled EVs can act as distributed energy resources (DER) ...

DES combines advanced technologies and lithium-ion batteries to effectively store and manage energy within a power distribution network. Adopting DES enhances energy efficiency, ...

For larger installations or applications with higher energy density, liquid cooling technology, where chilled liquid lines carry heat away from batteries to a chiller, is the best option due to superior ...
