---

A zinc-bromine battery is a rechargeable battery system that uses the reaction between zinc metal and bromine to produce electric current, with an electrolyte composed of an aqueous solution ...

Chinese researchers have developed a zinc-bromine flow battery that demonstrated record stability through a new mechanism based on two-electron bromine transfer, with a 5 kW ...

A new advance in bromine-based flow batteries could remove one of the biggest obstacles to long-lasting, affordable energy storage. Scientists developed a way to chemically ...

In this work, a systematic study is presented to decode the sources of voltage loss and the performance of ZBFs is demonstrated to be significantly boosted by tailoring the key ...

This work contributes insights into the design of highly reversible Zn electrode in Zn-based flow batteries.

Aqueous zinc-bromine single-flow batteries (ZBSFBs) are highly promising for distributed energy storage systems due to their ...
